To Our Valued Clients:

Following are Some Suggestions for Additions/Enhancements to your Invoice Emailing Modules:

We are very happy to hear that your Invoice Emailing is well established and working so successfully. We have also been receiving various suggestions/requests from Customers and are now able to offer a number of Enhancements/Options that have been on your/their 'Wish Lists' for the Module.

(1) SAME-DAY MULTIPLE INVOICES FOR THE SAME CUSTOMER:

Often, Multiple Invoices need to be emailed to the Same Customer on the Same Day. It would be beneficial, mainly for the Intended Customer, to send all those Invoices as Attachments to a Single Email, rather than as Separate Ones, as done at present.

(2) ADDING / ENTERING / OVERRIDING EMAIL ADDRESSES AT THE TIME OF INVOICING:

Sometimes the Purchaser (Contact Person) wants or needs to be sent the Emailed Invoice, along with or instead of, the Person Specified in the Customer Record. We could accommodate this request by Adding an Option at the time the Order is released for Invoicing; this will allow the operator to Replace The Existing Address or Add an Extra One.

(3) RESENDING INVOICES WITH A CHANGED (EMAIL) ADDRESS:

Sometimes, an Invoice has to be Re-Sent to a Customer, but Not Necessarily to the Same Address, as Originally Applied - whether because the address was wrong or because a Different Person should be receiving it. At present, the change has to be made Manually (by someone at OASYS), or the Invoice has to be Snail-Mailed. We could set up a Module that Would Allow Resending to a Different Address, Picked (A) from the Customer Record, or (B) Entered Manually at the time of Sending.

In practice, for all Three Options above, we will need to keep the 'Body' (Content) of the Emailed Invoice(s) Separate from the Portion Holding the Address, so that, if needed, the Address can be Modified/Reset/Added to. To accommodate Options 2 & 3, we would Create an Index by Customer/Email Address and use it to Combine Invoices for One Email or Send Multiple Copies to Various Addresses.

If all Three Options Are Implemented at the Same Time, it will take 20-24 Hours of Programming; separately we would need about 10-12 Hours Per Module.

Please don't hesitate to contact us for further information.
